Projects with impact

DESIGN - RELIABILITY - DELIVERY

01

Business cockpit for computer purchasing and resale

IN PRODUCTION 179 RECORDS MANAGED

Designed and led delivery of one system covering purchasing, inventory, PC assembly, price estimation, margins, and ROI. Automated, human-supervised purchase detection from Gmail and IMAP, with Google Sheets as the business source of record.

02

Windows 11 PC preparation automation

21 STEPS 4 HOURS -> UNDER 20 MIN AUTONOMOUS RUN

Windows, drivers, updates, applications, optimisation, and checks. Reduced preparation from about 4 hours of manual work to under 20 minutes depending on the machine, with no human intervention during execution, plus recovery, logs, and reports.

03

AI agent orchestrator connected to a task manager

TYPESCRIPT + BUN PERSISTENT STATE CHAOS TESTING

Pipeline that qualifies and executes tasks sequentially, with locking, failure recovery, alerts, systemd scheduling, and unit, integration, and chaos testing.

PROFILE

At the intersection of operations, AI, and enterprise IT, I shape end-to-end solutions: requirements, business rules, AI-assisted delivery, acceptance testing, deployment, documentation, and operation.

How I work: operational autonomy, disciplined delivery, and AI as an accelerator.

END-TO-END DELIVERY

01 Scope

Needs, rules, priorities

02 Build

AI-assisted development

03 Assure

Acceptance, tests, recovery

04 Operate

Deployment, monitoring, improvement

TOOLS & ENVIRONMENTS
